Master of Science in Environmental Physics

Module Description

University of Bremen Faculty 1 Physics and Electrical Engineering

March 2018

This module description merely serves for the orientation of the students. Legally binding is the German version of the valid Examination Regulations for the M.Sc. in Environmental Physics.

We try to keep this module description up-to-date, however, modifications with respect to personnel and content may occur.

History of changes to the module description:

Date	Version	Changes
March 2018	Summer Semester 2018	new optional course: Atmospheric Chemistry Modelling: Part 2 (Laboratory)
Jan. 2018	Winter Semester 2017/2018	 new course numbers new order sorted by module sections and in alphabetical order within the module sections changes of course titles: old: Aerosol and Radiative Aspects in Clouds / new: Atmospheric Aerosols old: Atmospheric Chemistry II / new: Biogeochemistry old: Molecular Physics / new: Atmospheric Spectroscopy new optional courses: Atmospheric Chemistry Modeling: Part 1 Climate Modelling: Part 1 Climate Modelling: Part 2 Ice Mass Balance and Remote Sensing
March 2017	Summer Semester 2017	2 lecturers changed
Dec. 2016	Winter Semester 2016/2017	 module description in English only cancelled optional courses: Physics of Polar Ice Core Records The Upper Atmosphere new optional courses: Practical Data Analysis with Python
Nov. 2015	Winter Semester 2014/2015	 module description in German + English description per individual course Atmospheric Chemistry II: Change from compulsory module to optional module
Nov. 2013	Winter Semester 2013/2014	 module description in German only description per general modules 1 – 7 each including a list of the appendant courses

Contents

Overview / Module Plan	
Module Section 1: Basics	
(Compulsory Modules) / 25 CP	5
Atmospheric Chemistry I	5
Atmospheric Physics	6
Climate System I	8
Physical Oceanography	9
Soil Physics	10
Module Section 2: Theoretical Basics	
(Compulsory Modules) / 16 CP	11
Dynamics I	11
Dynamics II	12
Inverse Methods and Data Analysis	13
Module Section 3: Experimental Techniques	
(Compulsory Modules) / 10 CP	14
Measurement Techniques	14
Remote Sensing I	15
Module Section 4: Advanced Environmental Physics	
(Elective Modules / "Special Topics") / 18 CP	16
Atmospheric Aerosols	16
Atmospheric Chemistry Modelling: Part 1 (Theory)	17
Atmospheric Chemistry Modelling: Part 2 (Laboratory)	18
Atmospheric Spectroscopy	19
Biogeochemistry	20
Chemistry and Dynamics of the Ozone Layer	21
Climate II	22
Climate Modelling: Part 1	23
Climate Modelling: Part 2	24
Cloud Physics	25
Digital Image Processing	26
Environmental Radioactivity	28
General Meteorology	29
Global Carbon Cycle	30
Ice Mass Balance and Remote Sensing	31

Instrumental Techniques for Environmental Measurements	32
Mathematical Modelling	33
Microwave Remote Sensing	34
Ocean Optics and Ocean Color Remote Sensing	36
Physical Oceanography II	38
Polar Oceanography	39
Practical Data Analysis with Python	40
Statistics and Error Analysis	42

Module Section 5: Research in Environmental Physics43(Compulsory Modules) / 21 CP43Proseminar on Presentation Techniques in Environmental Physics43Preparatory Project (Vorbereitungsprojekt)44

Module 6 / Final Module

(Compulsory Module) / 30 CP	45
Master's Thesis	45

Overview / Module Plan M.Sc. Environmental Physics

Semester	Compulsory Modules + Final Module/Master's Thesis (102 CP)		Elective Modules (18 CP)	CP/Sem.	
1	Atmospheric Physics (6 CP)	Physical Oceanography (6 CP)	Soil Physics (3 CP)		33
	Atmospheric Chemistry I (6 CP)	Inverse Methods and Data Analysis (6 CP)	Dynamics I (6 CP)		
2	Climate System I (4 CP)	Dynamics II (4 CP)	Remote Sensing I (4 CP)	Special Topics (9 CP)	27
	Measurements Techniques (6 CP)				
3	Proseminar on Presentation Techniques in Environmental Physics(3 CP)	Preparatory Project (18 CP)		Special Topics (9 CP)	30
4	Master's Thesis (30 CP)				30

Abbreviations:

CP Credit points

EC Example classes

H Hours

L Lecture

SWH Semester weekly hours

Remarks:

Partial exam: Credit points for a module are granted upon successful examination performance and successful course performance.

Module examination: Here, credit points are granted upon successful assessment of the thesis paper as the final product of the preparatory project. Examination performances are graded.

Course performances are not graded.

Module Section 1: Basics

Code no.	01-03-AtC1
Module title	Atmospheric Chemistry I
Responsible for the module, lecturers / module assignment	PD Dr. Annette Ladstätter-Weißenmayer / Prof. Dr. Mihalis Vrekoussis Module section 1 / Basics
Assignment to study programmes	Compulsory for MSc Environmental Physics Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	4 SWH / 2x lecture (L) + 2x example classes (EC)
Workload / credit points	 6 CP, 180 h presence (L + EC): 56 h (4 SWH x 14 weeks) preparation, learning + examples: 56 h (4 SWH x 14 weeks) preparation for exam: 68 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester (1st academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	History of the atmospheres of the earth; atmospheric composition; thermodynamics, thermochemistry and chemical equilibria; photochemistry; kinetic theory of reactions and reaction rate coefficients; chain reactions; atmospheric chemical mechanisms and transformations in the thermosphere, mesosphere, stratosphere and the troposphere.
Learning outcome	Basics chemistry of the atmosphere
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes
Literature	 John H. Seinfeld, Spyros N. Pandis Atmospheric Chemistry and Physics: From Air Pollution to Climate Change, 3rd Edition Finlayson-Pitts B. J. and J. N. Pitts, Atmospheric Chemistry Ann M. Holloway and Richard P. Wayne, Atmospheric Chemistry, RSC Publishing, 2010 John M. Wallace and Peter V. Hobbs Atmospheric Science (Second Edition): An Introductory Survey

Code no.	01-03-AtPhy
Module title	Atmospheric Physics
Responsible for the	Prof. Dr. John P. Burrows
module, lecturers /	Module section 1 / Basics
module assignment	
Assignment to study	Compulsory for MSc Environmental Physics
programmes	Compulsory for MSc Space Sciences and Technologies
	Compulsory for MSc Space Engineering II
	Optional compulsory for MSc Physik
	Optional compulsory for MSc Marine Geosciences
	Optional compulsory for MSc Technomathematik
	Optional compulsory for MSc Physical Geography: Environmental History
Semester weekly hours	4 SWH / 2x lecture (L) + 2x example classes (EC)
(SWH)	
Workload /	6 CP, 180 h
credit points	 presence (L + EC): 56 h (4 SWH x 14 weeks)
	 preparation, learning + examples: 56 h (4 SWH x 14 weeks)
	preparation for exam: 68 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester (1st academic year)
Duration / Semester	i semester / winter semester (ist academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for	No formal requirements
participation Content	The evicin of the color system and the corthin structure the systems
Content	The origin of the solar system and the earth's atmosphere; the evolving atmospheric composition; the physical parameters determining conditions in
	the atmosphere (e.g. temperature, pressure, and vorticity); the laws
	describing electromagnetic radiation; the interaction between electromagnetic
	radiation and matter (absorption emission and scattering); atmospheric
	radiative transport; radiation balance, climate change; atmospheric
	thermodynamics and hydrological cycle; aerosols and cloud physics; an
	introduction into atmospheric dynamics (kinematics, circulation etc.)
	An adaption understanding of the funder entries of stresses have a here's
Learning outcome	An adequate understanding of the fundamentals of atmospheric physics. This addresses a) gaining an understanding the laws of physics, which
	determine the behaviour of the earth system comprising the sun the
	atmosphere and earth surface, b) learning the ability to apply the laws of
	physics to calculate parameters and forecast conditions in the atmosphere.
	This knowledge is required for subsequent advanced courses in the M.Sc.
	programmes. In later life, these learning outcomes are essential for
	undertaking a) research in atmospheric, environmental and climate science
	Earth observation and remote sensing form ground based ship, aircraft and space based instrumentation, b) being employment in earth observation,
	earth science, meteorology, industry, or governmental and space agencies.
Course and examination	Partial exam
performance, type of	Examination performance: Written exam/oral exam (will be announced by the
exam	respective lecturer)
	Course performance: Successful assessment of example classes

Code no.	01-03-CliS1
Module title	Climate System I
Responsible for the	Prof. Dr. Torsten Kanzow
module, lecturers /	Module section 1 / Basics
module assignment	
Assignment to study	Compulsory for MSc Environmental Physics
programmes	Optional compulsory for MSc Physik
	Optional compulsory for MSc Marine Geosciences
	Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	3 SWH / 2x lecture (L) + 1x example classes (EC)
Workload /	4 CP, 120 h
credit points	 presence (L + EC): 42 h (3 SWH x 14 weeks)
	 preparation, learning + examples: 42 h (3 SWH x 14 weeks)
	 preparation for exam: 36 h
Offered frequency	Annually / summer semester
Duration / semester	1 semester / summer semester (1st academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	Climate on earth / climate variations / the climate system / energy balance models / radiation & convection / role of the ocean in climate
Learning outcome	Climate physics
Course and examination	Partial exam
performance, type of	Examination performance: Written exam/oral exam (will be announced by the
exam	respective lecturer)
	Course performance: Successful assessment of example classes
Literature	Will be announced in the respective course.

Code no.	01-03-PhyO
Code no.	01-03-FilyO
Module title	Physical Oceanography
Responsible for the	Prof. Dr. Monika Rhein / Dr. Reiner Steinfeldt / Dr. Oliver Huhn
module, lecturers / module assignment	Module section 1 / Basics
Assignment to study	Compulsory for MSc Environmental Physics
programmes	Optional compulsory for MSc Physik
	Optional compulsory for MSc Marine Geosciences
	Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	4 SWH / 2x lecture (L) + 2x example classes (EC)
Workload /	6 CP, 180 h
credit points	 presence (L + EC): 56 h (4 SWH x 14 weeks)
	 preparation, learning + examples: 56 h (4 SWH x 14 weeks)
	 preparation for exam: 68 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester (1st academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	External forcing (radiation, winds, tides), global distribution of important dynamic and physical parameters, water mass formation, wind-driven 3D circulation, geostrophy, meridional overturning, role of ocean in climate change
Learning outcome	Understand fundamentals of physical oceanography
Course and examination	Partial exam
performance, type of	Examination performance: Written exam/oral exam (will be announced by the
exam	respective lecturer)
	Course performance: Successful assessment of example classes
Literature	Will be announced in the respective course.

Code no.	01.02 SDby
	01-03-SPhy
Module title	Soil Physics
Responsible for the	Dr. Helmut Fischer
module, lecturers /	Module section 1 / Basics
module assignment	
Assignment to study	Compulsory for MSc Environmental Physics
programmes	Optional compulsory for MSc Physik
	Optional compulsory for MSc Marine Geosciences
	Optional compulsory for MSc Technomathematik
	Optional compulsory for MSc Physical Geography: Environmental History
Semester weekly hours (SWH)	2 SWH / 1x lecture (L) + 1x example classes (EC)
Workload /	3 CP, 90 h
credit points	 presence (L + EC): 28 h (2 SWH x 14 weeks)
	 preparation, learning + examples: 28 h (2 SWH x 14 weeks)
	preparation for exam: 34 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester (1st academic year)
Duration, Semester	
Course language	English
Compulsory / optional	Compulsory
Dequiremento for	No formal requirements
Requirements for	No formal requirements
participation Content	Company of soils and their properties interaction matrix soil water soil
Content	Components of soils and their properties, interaction matrix – soil water, soil water retention curve, water transport in saturated and unsaturated soil,
	transport of pollutants and tracers
Learning outcome	Fundamentals of soil physics
Course and examination	Partial exam
performance, type of	Examination performance: Written exam/oral exam (will be announced by the
exam	respective lecturer)
	Course performance: Successful assessment of example classes

Module Section 2: Theoretical Basics

Code no.	01-03-Dyn1
Module title	Dynamics I
Responsible for the module, lecturers / module assignment	Prof. Dr. Thomas Jung Module section 2 / Theoretical Basics
Assignment to study programmes	Compulsory for MSc Environmental Physics Optional for MSc Space Sciences and Technologies Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	4 SWH / 2x lecture (L) + 2x example classes (EC)
Workload / credit points	 6 CP, 180 h presence (L + EC): 56 h (4 SWH x 14 weeks) preparation, learning + examples: 56 h (4 SWH x 14 weeks) preparation for exam: 68 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester (1st academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	Governing equations, basic conservation laws, balances, elementary applications of the basic equations, circulation and vorticity, planetary boundary layer, Rossby waves
Learning outcome	Understanding of the basic dynamical processes in atmosphere and ocean; learning how to interpret physical equations physically
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes
Literature	 Holton, An Introduc+on to Dynamic Meterorology, Elsevier Academic Press Marshall and Plumb: Atmosphere, Ocean, and Climate Dynamics, An Introductory Text, Academic Press, 2008 Wallace and Hobbs, Atmospheric Science: An Introductory Survey, Academic Press

Code no.	01-03-Dyn2	
Module title	Dynamics II	
Responsible for the module, lecturers / module assignment	Prof. Dr. Gerrit Lohmann Module section 2 / Theoretical Basics	
Assignment to study programmes	Compulsory for MSc Environmental Physics Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik	
Semester weekly hours (SWH)	3 SWH / 2x lecture (L) + 1x example classes (EC)	
Workload / credit points	 4 CP, 120 h presence (L + EC): 42 h (3 SWH x 14 weeks) preparation, learning + examples: 42 h (3 SWH x 14 weeks) preparation for exam: 36 h 	
Offered frequency	Annually / summer semester	
Duration / semester	1 semester / summer semester (1st academic year)	
Course language	English	
Compulsory / optional	Compulsory	
Requirements for participation	No formal requirements	
Content	Fluid dynamics, ocean circulation, wind-driven and thermohaline circulation; atmosphere dynamics and teleconnections, dynamical system theory, non- dimensional parameters, bifurcations and instabilities; gravity, Rossby, Kelvin waves; Simple models, Stochastic climate model; Analytical and Programming techniques; Fourier and Laplace transformation; Time series analysis	
Learning outcome	Advanced dynamics of the ocean and atmosphere, applications in the fields of climate dynamics and fluid mechanics. Programming skills (R studio) and usage of the climate data operators. Theoretical concepts in physics of climate, temporal and spatial scales of climate dynamics	
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes	
Literature	 Holton, J.R., Introduction to Dynamical Meteorology, Academic Press Gill, A., Atmosphere-Ocean Dynamics, Academic Press Dutton, J.A., The Ceaseless Wind, Dover Olbers, D.J., et al., Ocean Dynamics, Springer Cushman-Roisin, B. & Beckers, JM., Introduction to Geophysical Fluid Dynamics: Physical and Numerical Aspects Marchal, J., and R. Code no.	01-03-IMDA	
Module title	Inverse Methods and Data Analysis	
Responsible for the module, lecturers / module assignment	Prof. Dr. Reiner Schlitzer / Prof. Dr. Emily King Module section 2 / Theoretical Basics	
Assignment to study programmes	Compulsory for MSc Environmental Physics Compulsory for MSc Space Sciences and Technologies Compulsory for MSc Space Engineering II Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik	
Semester weekly hours (SWH)	4 SWH / 2x lecture (L) + 2x example classes (EC)	
Workload / credit points	 6 CP, 180 h presence (L + EC): 56 h (4 SWH x 14 weeks) preparation, learning + examples: 56 h (4 SWH x 14 weeks) preparation for exam: 68 h 	
Offered frequency	Annually / winter semester	
Duration / semester	1 semester / winter semester (1st academic year)	
Course language	English	
Compulsory / optional	Compulsory	
Requirements for participation	No formal requirements	
Content	Error analysis and statistics, techniques for the optimal solution of under and over determined systems of linear equations including methods for calculating variances and covariances of the solutions, concepts of resolution and methods to calculate them, practical examples and applications to test data sets from oceanography, image processing and remote sensing of the atmosphere, earth, outer space, and celestial bodies.	
Learning outcome	Introduction to linear inverse methods	
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes	
Literature	Will be announced in the respective course.	

Module Section 3: Experimental Techniques

Code no.	01-03-MeTe	
Module title	Measurement Techniques	
Responsible for the	Dr. Andreas Richter / Dr. Christian Mertens	
module, lecturers /	Module section 3 / Experimental Techniques	
module assignment		
Assignment to study programmes	Compulsory for MSc Environmental Physics	
Semester weekly hours (SWH)	4 laboratory (Lab) + 1 lecture (L)	
Workload /	6 CP, 180 h	
credit points	 presence (L): 18 h (6 SWH x 3 weeks) 	
	 presence (Lab): 24 h (6 SWH x 4 weeks) 	
	 preparation, report: 84 h (12 SWH x 7 weeks) 	
	 preparation for exam: 54 h 	
Offered frequency	Annually / summer semester	
oncicu inclucincy	Annually / Summer Semester	
Duration / semester	1 semester / summer semester (1st academic year)	
Course language	English	
Compulsory / optional	Compulsory	
Requirements for participation	No formal requirements	
Content	A set of practical measurements of meteorological quantities, atmospheric trace gases, ocean currents, environmental radioactivity, and absorption cross-sections using different techniques is performed by the students under supervision of tutors. The measurements obtained in the lab will then be analysed and the experiment, its background and the results as well as their interpretation be documented in a written report.	
Learning outcome	Participants will perform measurements in Environmental Physics using scientific techniques and methods. They learn to analyse the measurements and to document the results in a written report.	
Course and examination	Partial exam	
performance, type of	Examination performance: Oral exam	
exam	Course performance: Successful experiments with accepted reports	
Literature	Will be announced in the respective course.	

Code no.	01-03-RemS1
Module title	Remote Sensing I
Responsible for the	Prof. Dr. Astrid Bracher / Dr. Mathias Palm
<u>module</u> , lecturers / module assignment	Module section 3 / Experimental Techniques
Assignment to study	Compulsory for MSc Environmental Physics
programmes	Optional compulsory for MSc Physik
	Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
	Optional compulsory for MSc Physical Geography: Environmental History
Semester weekly hours (SWH)	3 SWH / 2x lecture (L) + 1x example classes (EC)
Workload /	4 CP, 120 h
credit points	 presence (L + EC): 31,5 h (2,25 SWH x 14 weeks) preparation for rapport: 13,5 h
	 preparation for rapport. 13,5 fr preparation and re-analysing examples: 45 h (4,5 SWH x 10 weeks)
	 preparation for exam: 30 h
Offered frequency	Annually / summer semester
Onered nequency	Annually / Summer Semester
Duration / semester	1 semester / summer semester (1st academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	The course introduces the theoretical background of remote sensing methods (interaction of electromagnetic radiation with matter (spectroscopy), radiative transfer, principles of satellite remote sensing). Mostly passive (thermal emission, backscattered light) but also Active (radar used in sea ice) remote sensing techniques and their data analysis (retrievals) are explained. This is illustrated by a large number of examples available and in use in the different research groups in the Institute of Environmental Physics (IUP).
Learning outcome	Basics of radiative transfer, spectroscopy, retrieval techniques. Overview of remote sensing from satellite, ground and airborne platforms in MW, IR and UV-VIS spectral range. Techniques in atmospheric remote sensing, sea ice remote sensing, ocean color remote sensing
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes (oral rapport of 5-10 min. summarizing one of the lectures, exercises and a total of 70 points need to be reached in 10 exercises with 10 points each)
Literature	Will be announced in the respective course.

Module Section 4: Advanced Environmental Physics

Code no.	01-03-AtA
Module title	Atmospheric Aerosols
Responsible for the module, lecturers / module assignment	Dr. Marco Vountas / Dr. Linlu Mei Module section 4 / Advanced Environmental Physics
Assignment to study programmes	Optional for MSc Environmental Physics Optional compulsory for MSc Space Sciences and Technologies Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
Workload / credit points	 3 CP, 90 h presence (L + EC): 28 h (2 SWH x 14 weeks) preparation, learning + examples: 28 h (2 SWH x 14 weeks) preparation for exam: 34 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Description of atmospheric aerosols, their composition and measuring methods. Introduction to radiative transfer in the troposphere with emphasis on aerosols and clouds
Learning outcome	Advanced knowledge of the atmosphere and light scattering
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	Will be announced in the respective course.

Code no.	01-03-AtCM1
Module title	Atmospheric Chemistry Modelling: Part 1 (Theory)
Responsible for the module, lecturers / module assignment	Prof. Dr. Mihalis Vrekoussis Module section 4 / Advanced Environmental Physics
Assignment to study programmes	Optional for MSc Environmental Physics Optional compulsory for MSc Space Sciences and Technologies
Semester weekly hours (SWH)	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
Workload / credit points	 3 CP, 90 h presence (L + EC): 28 h (2 SWH x 14 weeks) preparation, learning + examples: 42 h (3 SWH x 14 weeks) preparation for exam: 20 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	 Concept of chemistry transport models Atmospheric Chemical Composition/Processes Model equations and numerical approaches focusing on the: a) formulation of atmospheric rates b) numerical methods for chemical systems Surface fluxes/emissions Observations and model evaluations Inverse modeling for atmospheric chemistry
Learning outcome	Participants will have the chance to: Get a theoretical overview of the concepts of numerical atmospheric chemistry modelling, to review fundamentals of atmospheric chemistry and physics, to formulate model equations and numerical (differential) approaches for various systems focusing on atmospheric chemistry mechanisms and to assess the role of chemistry transport models as components of the atmospheric observing system. Concepts of inverse modelling will be also presented.
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	Will be announced in the respective course.

Code no.	01-03-AtCM2
Module title	Atmospheric Chemistry Modelling: Part 2 (Laboratory)
Responsible for the module, lecturers / module assignment	Dr. Nikos Daskalakis Module section 4 / Advanced Environmental Physics
Assignment to study programmes	Optional for MSc Environmental Physics
Semester weekly hours (SWH)	2 SWH / 1x lecture (L) + 1x example classes (EC)
Workload / credit points	 3 CP, 90 h presence (L + EC): 28 h (2 SWH x 14 weeks) preparation, learning + examples: 42 h (3 SWH x 14 weeks) preparation for exam: 20 h
Offered frequency	Annually / summer semester
Duration / semester	1 semester / summer semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	 introduction to the moguntia model explanation input files manipulation and analysis of results study of interhemispheric transports study the budget of simulated CO simulate the growth of CO₂ mixing ratios simulate the concentrations of methyl chloroform simulate the methyl-chloroform/OH constrains
Learning outcome	Participants will have the chance to: Have a hands-on experience on how atmospheric chemistry models work, prepare the input needed by a model, run the model and process the output of the model in order to come to scientific conclusions
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	Will be announced in the respective course.

Code no.	01-03-AtSp
Module title	Atmospheric Spectroscopy
Responsible for the	Prof. Dr. Justus Notholt
<u>module</u> , lecturers / module assignment	Module section 4 / Advanced Environmental Physics
Assignment to study	Optional for MSc Environmental Physics
programmes	Compulsory for MSc Space Sciences and Technologies
	Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
Semester weekly hours	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
(SWH) Workload /	3 CP, 90 h
credit points	 presence (L + EC): 28 h (2 SWH x 14 weeks)
	 preparation, learning + examples: 28 h (2 SWH x 14 weeks)
	 preparation for exam: 34 h
Offered frequency	Annually / summer semester
Offered frequency	Annually / summer semester
Duration / semester	1 semester / summer semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Prismen and grating spectrometers, Fourier-Transform-Spectroscopy, transitions, rotational spectra, vibrational spectra, rotational-vibrational spectra, remote sensing methods
	Design of encotroppents begins of male submany stress and the desites of the
Learning outcome	Basics of spectroscopy, basics of molecular spectroscopy. Understanding and interpretation of measured spectra with regard to the structure of the molecules. Basics of prism, grating and FTIR-spectroscopy, understanding of remote sensing methods.
Course and examination	Partial exam
performance, type of exam	Examination performance: Written exam/oral exam (will be announced by the respective lecturer)
CAdili	Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	Will be announced in the respective course.

Module title	Chemistry and Dynamics of the Ozone Layer
Descus all la face (La	
Responsible for the module, lecturers /	PD Dr. Björn-Martin Sinnhuber Module section 4 / Advanced Environmental Physics
module assignment	
Assignment to study	Optional for MSc Environmental Physics
programmes	Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	Block course (corresponding to 2 SWH)
Workload /	3 CP, 90 h
credit points	 presence (L + EC): 40 h (block course 5 days) preparation, learning + examples: 25 h
	 preparation, rearning + examples. 25 fr preparation for exam: 25 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Dynamics and chemistry of the ozone layer, implementation of a numerical model of the ozone layer and model based analyses
	The ozone layer and its role in the climate system
	 Introduction to scientific programming (with practical exercises) Atmospheric chemistry modeling (with practical exerises)
	• Autosphene chemistry modeling (with practical exenses)
Learning outcome	Further understanding of chemistry-climate-interactions, skills in scientific computer programming
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	No particular literature needed, recommended reading will be announced in the course.

Code no.	01-03-Cli2
Module title	Climate II
Responsible for the module, lecturers /	Prof. Dr. Gerrit Lohmann / Dr. Martin Werner Module section 4 / Advanced Environmental Physics
module assignment	
Assignment to study programmes	Optional for MSc Environmental Physics Optional compulsory for MSc Marine Geosciences Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
Workload / credit points	 3 CP, 90 h presence (L + EC): 28 h (2 SWH x 14 weeks) preparation, learning + examples: 42 h (3 SWH x 14 weeks) preparation for exam: 20 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Climate models, possibilities and limitations to observe climate change, ice ages and orbital variations, Holocene, glacial-interglacial variability; Cenozoic climate, abrupt climate change; climate scenarios, sea level, environmental archives, palaeoclimate data, biogeochemical cycles, feedbacks; Spectra and time series analysis; Modes of variability
Learning outcome	Advanced climate course: Theories, models, observations. Past-present-future climate changes
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	 Bradley, Paleoclimatology-Reconstructing climates of the Quaternary, 1999 Saltzman, Dynamical Paleoclimatology - A generalized theory of global climate change, Academic Press, San Diego, 2002 Ruddiman, Earth's Climate Past and Future Paleoclimate, Global Change and the Future, 2003 by Keith D. Alverson, Raymond S. Bradley, Thomas F. Pedersen (Editors) Broecker, THE GLACIAL WORLD ACCORDING TO WALLY

Code no.	01-03-CliM1
Module title	Climate Modelling: Part 1
Responsible for the module, lecturers / module assignment	Prof. Dr. Veronika Eyring Module section 4 / Advanced Environmental Physics
Assignment to study programmes	Optional for MSc Environmental Physics Optional for MSc Space Sciences and Technologies Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences
Semester weekly hours (SWH)	Block course (corresponding to 2 SWH)
Workload / credit points	 3 CP, 90 h presence (L + EC): 28 h (block course 5 days) preparation, learning + examples: 42 h preparation for exam: 20 h
Offered frequency	Annually / summer semester
Duration / semester	1 semester / summer semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Types of Climate Models Energy Balance Models Radiative-Convective Models Components of Atmosphere Ocean General Circulation Models (GCMs) Fundamentals and representation in GCMs: atmospheric component Fundamentals and representation in GCMs: ocean and sea ice component Fundamentals and representation in GCMs: ocean and sea ice component Steps in Model Formulation Introduction to the Coupled Model Intercomparison Project (CMIP) Results from GCMs: Climate change and climate warming Climate model evaluation with observations Frequently Asked Questions IPCC Assessment Reports Computational exercises with simple climate models Computation exercises in Python
Learning outcome	Understanding simple climate models and General Circulation Models (GCMs), their results and limitations; basics in Python.
Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay
Literature	Will be announced in the respective course.

Code no.	01-03-CliM2

	-
Duration / semester	1 semester / summer semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Digital images, sampling
	Grey level transformations, color images
	Image enhancement using filters
	 Image analysis methods using segmentation, feature extraction and classification
	 Fourier transformation of digital images, linear filters in spatial and
	frequency domains
	Data compression, image coding, image formats
Learning outcome	Fundamentals, basic concept and methods of digital image processing,
	enabling the students to identify and understand image processing problems
	(encountered in Environmental Physics, Space Science etc.) and to find
	appropriate solutions
Course and examination	Partial exam
performance, type of	Examination performance: Written exam/oral exam (will be announced by the
exam	respective lecturer)

Responsible for the	Prof. Dr. Astrid Bracher
<u>module</u> , lecturers /	Module section 4 / Advanced Environmental Physics
module assignment	
Assignment to study	Optional for MSc Environmental Physics
programmes	Optional compulsory for MSc Marine Geosciences
	Optional compulsory for MSc Technomathematik
Semester weekly hours (SWH)	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
Workload /	3 CP, 90 h
credit points	 presence (L + EC): 28 h (2 SWH x 14 weeks)
	 preparation for rapport: 29 h
	preparation for exam: 33 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	First, the course covers the principles of ocean optics. Topics included are basic physics of light and interaction of light with matter in water. This includes the theory behind inherent and apparent optical properties and the, radiative transfer equation, e.g., the light field within the ocean is explained and the water-leaving radiance and remote-sensing reflectance terms are introduced. The effect of the various seawater constituents' (absorption, scattering, fluorescence) on ocean reflectance is presented. Optical instrumentation and measurement techniques to measure the relevant parameters are introduced. Secondly, the lecture focuses on ocean color remote sensing. This includes the principles of ocean color remote sensing, an overview of the technology of the instruments commonly used as ocean color satellite sensors and their satellite platforms. But also the streams of the data processing from raw data to the final geophysical product. Especially explained are various atmospheric correction methods and retrieval techniques of ocean color data products, such as phytoplankton biomass, phytoplankton photosynthetic activity, major phytoplankton groups, other particulates, coloured disolved organic matter and light penetration depth. Finally, also validation techniques of ocean color data products and the application of these data in global ecosystem and biogeochemical models are presented.
Learning outcome	Basics of radiative transfer in water (inherent and apparent optical properties) and ocean color remote sensing, ocean optics measurement techniques, atmospheric correction, empirical, semi-analytical, neuronal network retrieval techniques to determine water constituents and radiation in the water, validation of algorithms and sensors and potential of such data for application in ecosystem and climate studies and marine and coastal management.

Course and examination performance, type of exam	Partial exam Examination performance: Written exam/oral exam (will be announced by the respective lecturer) Course performance: Successful assessment of example classes and/or successful writing of an essay (one oral rapport on one lecture)

Assignment to study programmes	Optional for MSc Environmental Physics Optional compulsory for MSc Physik Optional compulsory for MSc Marine Geosciences
Semester weekly hours (SWH)	2 SWH / 1x lecture (L) + 1x example classes (EC)
Workload / credit points	 3 CP, 90 h presence (L + EC): 28 h (2 SWH x 14 weeks) preparation, learning + examples: 26 h (2 SWH x 13 weeks) homework project (examination): 36 h
Offered frequency	Annually / summer semester
Duration / semester	1 semester / summer semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	 The course will touch on the following subjects: "But this worked yesterday, before I made some changes" or: An introduction to version control Getting started: How to setup your own computer for data analysis in Python. Hands-on introduction to the Python scientific ecosystem: Arrays and mathematical operations, using NumPy. Labeled arrays or how to intuitively work with data, using Pandas and xarray. Reading and writing data in common file formats. Making both meaningful and beautiful plots, using matplotlib. Statistical analysis in Python using the SciPy and Statsmodels packages. Parameter estimation / regression using SciPy An overview of the most common special-topic libraries for the research areas covered by the students' study programmes. Working with geoscientific data and plotting maps, using Cartopy and Shapely. Other data analysis tasks needed by the students for their study program, upon demand.
Learning outcome	Upon successful completion of this course, the student will be able to work with scientific data using the Python scientific programming ecosystem, including the whole scientific data lifecycle (reading data, statistical analysis, plotting, storing results), following modern scientific programming best practices (e.g., version control, reproducibility, documentation,).

Course and examination performance, type of exam	Partial exam Examination performance: Two graded homework projects Course performance: Successful assessment of example classes and/or successful writing of an essay

Offered frequency	Annually / summer semester
Duration / semester	1 semester / summer semester
Course language	English
Compulsory / optional	Optional
Requirements for participation	No formal requirements
Content	Random variables, probability, density and distribution functions, expectation values, covariance and correlation, error propagation, statistical tests
Learning outcome	Introduction to statistics, error calculation and data analysis
Course and examination	Partial exam
performance, type of	Examination performance: Written exam/oral exam (will be announced by the
exam	respective lecturer)
	Course performance: Successful assessment of example classes and/or
	successful writing of an essay
Literature	Will be announced in the respective course.

Module Section 5: Research in Environmental Physics

Code no.	01-03-PresT
Module title	Proseminar on Presentation Techniques in Environmental Physics
Responsible for the	Dr. Andreas Richter
module, lecturers /	Module section 5 / Research in Environmental Physics
module assignment	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
Assignment to study	Compulsory for MSc Environmental Physics
programmes	
Semester weekly hours (SWH)	2 SWH (2 PS)
Workload /	3 CP, 90 h
credit points	 presence (L): 28 h (2 SWH x 14 weeks)
	 preparation of two talks: 40 h (20 h/week x 2 weeks)
	 preparation of one poster / extended abstracts: 22 h
Offered frequency	Annually / winter semester
Duration / semester	1 semester / winter semester (2nd academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	Structure and content of oral presentations, layout and organization of slides, how to give good oral presentations (content, presentation style, body language,), how to deal with questions and answers, how to prepare a poster for a conference, how to write an extended abstract, how to do a literature research, how to cite and how to use bibliographic software.
Learning outcome	How to prepare and give oral presentations, posters, and extended abstracts on topics of Environmental Physics.
Course and examination	Partial exam
performance, type of	Examination performance: 1 poster or extended abstract (4 pages)
exam	Course performance: Successful assessment of 2 oral presentations
Literature	Will be announced in the respective course.

Code no.	01-03-PrEPhy
Module title	Preparatory Project (Vorbereitungsprojekt)
Responsible for the module, lecturers / module assignment	Prof. Dr. John P. Burrows, Prof. Dr. Justus Notholt, Prof. Dr. Monika Rhein, PD Dr. Annette Ladstätter-Weißenmayer, Prof. Dr. Mihalis Vrekoussis, Prof. Dr. Veronika Eyring as well as further university lecturers of the IUP (Institute of Environmental Physics) / AWI (Alfred Wegener Institute, Helmholtz Centre for Polar and Marine Research) depending on the area of research Module section 5 / Research in Environmental Physics
Assignment to study programmes	Compulsory for MSc Environmental Physics
Semester weekly hours (SWH)	Working in the laboratories of the IUP / AWI Individual instruction (practical training) Preparation of a thesis paper on a possible research project which - as a rule - should be closely related to the subsequent Master's Thesis.
Workload / credit points	18 CP, 540 h
Offered frequency	Annually / winter semester
Duration / semester	Winter semester (2nd academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	No formal requirements
Content	The content is related to the respective area of research of the preparatory project.
Learning outcome	 Transfer of a scientific problem/question into an experimental and/or theoretical study Successful strategies for the planning and conducting of scientific studies Summarize and present preliminary scientific results in a thesis paper
Course and examination performance, type of exam	 Module examination (graded) Successful assessment of the preparatory project Thesis paper on research project which can be conducted within the context of the Master's Thesis
Literature	Will be announced in the respective course.

Module 6: Final Module

Code no.	01-03-FMEPhy
Module title	Master's Thesis
Responsible for the module, lecturers / module assignment	Prof. Dr. John P. Burrows, Prof. Dr. Justus Notholt, Prof. Dr. Monika Rhein, PD Dr. Annette Ladstätter-Weißenmayer, Prof. Dr. Mihalis Vrekoussis, Prof. Dr. Veronika Eyring as well as further university lecturers of the IUP (Institute of Environmental Physics) / AWI (Alfred Wegener Institute, Helmholtz Centre for Polar and Marine Research) depending on the area of research Module 6 / Final Module
Assignment to study programmes	Compulsory for MSc Environmental Physics
Semester weekly hours (SWH)	Master's Thesis Colloquium to the Master's Thesis
Workload / credit points	30 CP, 900 h
Offered frequency	Annually / summer semester
Duration / semester	Summer semester (2nd academic year)
Course language	English
Compulsory / optional	Compulsory
Requirements for participation	All the mandatory exams of the module sections 1 – 3 and the module "preparatory project" have to be passed.
Content	The content is related to the respective area of research of the Master's Thesis.
