

The Atmosphere as a Statistical Multifractal: from molecules to meteorology, turbulent scale invariance over 15 orders of magnitude.

Lecture 1.1 Introduction, slides 3-18

Lecture 1.2 Implications for radiative transfer & chemistry, slides 19-48

Lecture 2.1 Kinetics, fluid mechanics and scale invariance, slides 49-65

Lecture 2.2 Vertical scaling of observations, slides 66-99

Lecture 3.1 Horizontal scaling of observations, slides 100-122

Lecture 3.2 Correlations among scaling exponents, slides 123-149

Lecture 4.1 Consequences [1], slides 150-173

Lecture 4.2 Consequences [2], slides 174-193

Lecture 5.1 Molecular dynamics, scale invariance & natural selection, slides 194-217

Lecture 5.2 Key points and what to do about them, slides 218-239

Adrian Tuck

Visiting Professor, Physics Department, Imperial College London

University of Bremen, 01 - 12 October 2012
